

## Upgrading To A Newer Version Of Site Store Pro

When upgrading to a newer release version to the PayPal, Enterprise or Developer version, you do **NOT** need to reinstall the entire application or database.

You simply have to download the latest release from your account manager and then replace the `/estore_admin` and `/SiteStorePro` directories with the folders of the SAME NAME located in the `'UPGRADE_From_Trial_LITE_VERSION'` folder in your new zip file. (The upgrade from trial process and upgrading to a new version is very similar)

Replacing **ONLY** the `'estore_admin'` and `'SiteStorePro'` folders prevents the possibility of overwriting design files that were changed after your original install date.

### Upgrade Steps:

- 1) Login to your account manager at <https://www.sitestorepro.com/myaccount>
- 2) Download the latest zip file from the 'My Downloads' section of your account home page and save it to your local computer.
- 3) Open the zip file and extract (copy) the `/SiteStorePro` and `/estore_admin` folders to the location on your local system where you are working on the site. (Overwrite the folders and folder contents of the same name on your local system).
- 4) Upload the new `/sitestorepro` and `/estore_admin` folders to your webhosting server to complete the upgrade.
